#2510009 (Gifford)

#2510001 (Hampton)

#2510005 (Varnville)

#2510006 (Yemassee)

#2570908 (Yemassee - Industrial Park)

CREATED: AUGUST 2013

UPDATED: MARCH 2016

INTRODUCTION

Under the Safe Drinking Water Act (SDWA), a water supplier is responsible for preventing polluted or contaminated water or other substances from entering a public drinking water system. The control of interconnections (cross connections) between drinking water systems (potable) and other water systems of questionable quality (non-potable) is an integral component of providing a safe public drinking water distribution system.

The State Primary Drinking Water Regulations promulgated pursuant to Section 44-55-30 through 44-55-60 of the 1976 South Carolina Code of Laws, R-61-58.7F. Cross-Connection Control mandates that all public water systems shall initiate and maintain a program for the detection, elimination and prevention of cross connections. Pursuant to these regulations, the program shall consist of (1) locating and eliminating unprotected cross connections and (2) maintaining records pertaining to the location of existing backflow prevention assemblies, type and size of each assembly and annual test results.

To comply with these requirements, LRWS has established a Cross Connection Control Program as outlined in this document, as follows:

Section 1 – Cross Connection Control Program Requirements

Section 2 – SC DHEC Approved Backflow Prevention Assemblies

Section 3 – Testing Requirements & List of Certified Testers

Section 4 – Testing Notification Letter and Report Form

Section 5 – Inventory of LRWS Testable Devices & Test Results for Backflow Prevention Devices

Section 6 – Residential Lawn Irrigation Systems

Section 7 – State Primary Drinking Water Regulation for Cross Connection Control

SECTION 1: CROSS CONNECTION CONTROL REQUIREMENTS

1. Employees of LRWS will not install, permit to be installed or maintain any cross connection between the public water system and any other non-potable source unless an approved backflow prevention device is installed between the water system and the source contamination.
 - a. LRWS will conduct on-site evaluation of all new construction for possible sources of cross connections.
 - b. During normal operations, LRWS field staff will inspect existing connections to determine where cross connection hazards may exist (such as private wells, irrigation systems, etc).
 - c. LRWS will conduct annual inspections of all high hazard facilities for potential cross connections.
 - d. Any cross connection that is identified will be reported to the Distribution Supervisor.
 - e. Any cross connection that is identified that poses an immediate hazard to public health will be disconnected from the water system until proper protection has been installed and tested.
 2. The type of protective device required depends upon the degree of hazard that exists as follows:
 - a. A connection between LRWS and a service that is connected to any water or material that is dangerous to health will be categorized as High Hazard and will be protected by an air gap separation or an approved reduced pressure principle backflow prevention assembly.
 - i. A reduced pressure principle backflow assembly will not be installed in any location subject to possible flooding.
 - b. A connection between LRWS and a service that is connected to any water or material that would be objectionable based upon LRWS standards but not hazardous to health will be categorized as Low Hazard and will be protected by an approved double check valve or approved pressure vacuum breaker assembly.
 - c. A connection between LRWS and a fire sprinkler system, except those that are highly hazardous, will be protected by an approved double check valve assembly.
 - i. High hazard fire sprinkler systems are systems that may include hazardous materials such as antifreeze or foams, or are tied into ponds, lakes or any other water source other than an approved water supply.
 - ii. High hazard fire sprinkler systems will be protected by an air gap separation or an approved reduced pressure principle backflow prevention assembly.
 - d. A connection between LRWS and a low hazard residential irrigation system (with no chemical addition) will be protected by a residential dual check which will be installed as part of the meter assembly.
-

SECTION 2: APPROVED BACKFLOW PREVENTION ASSEMBLIES:

Only backflow prevention assemblies approved by SC DHEC are permitted in the LRWS water system. SC DHEC prepares and publishes a list of approved devices on an annual basis. Following is a current list of approved devices.

February 26, 2014

**NOTICE OF APPROVED BACKFLOW
PREVENTION ASSEMBLIES FOR SOUTH CAROLINA**

Enclosed is the revised list of approved backflow prevention assemblies and a list of backflow equipment representatives.

The following should be considered before selecting a particular assembly:

1. All local plumbing laws and regulations must be adhered to.
2. Manufacturer's installation instructions shall be strictly adhered to.
3. Reduced pressure principle assemblies shall be installed so that the relief port will never become submerged. This prohibits installation in a pit that cannot be drained by gravity to the surface of the ground. Also, RPPA are not acceptable for the vertical orientation unless approved by the University of Southern California's Foundation for Cross Connection Control & Hydraulic Research.
4. The operating performance of these assemblies varies among manufacturers; therefore, it suggested that local water authorities be contacted to assist in selecting an assembly which is best suited for that particular system.
5. The South Carolina Department of Health and Environmental Control reserves the right to add or to remove from the approved list any reduced pressure principle assembly, pressure vacuum breaker, or double check valve assembly.
6. It is a requirement that backflow prevention assemblies be tested immediately after installation and at least once a year thereafter. If a serious defect is discovered at the time of the first (immediate inspection after installation) inspection or after any subsequent inspections, it is requested that the Department of Health and Environmental Control be notified so prompt action can be taken to review the approved status of the assembly.
7. By-pass piping is not permitted unless the by-pass piping is equipped with an approved backflow prevention assembly similar to the main line assembly. In many instances it will be desirable, or necessary to install two approved backflow prevention assemblies in order that water service will not be interrupted during the testing or repair of the assembly.

8. Some manufacturers market, as non-standard equipment, assemblies capable of withstanding elevated temperatures. The high temperature assemblies should be ordered from the manufacturer to include documentation certifying their ability to withstand high temperatures.

9. Any reduced pressure principle assembly, pressure vacuum breaker, or double check valve assembly on this list of approved assemblies must be equipped with either resilient seated ball valves or resilient wedged gate valves. Butterfly valves are acceptable on backflow assemblies as long they are approved by the University of Southern California's Foundation for Cross Connection Control & Hydraulic Research.

10. If a manufacturer markets a prefabricate "manifold" series it will be approved as long as both of the assemblies in the manifold are from the approved list.

11. If a manufacturer markets a double detector check valve assembly or a reduced pressure principle detector assembly it will be approved as long as both assemblies are from the approved list. Both assemblies (main line assembly and by-pass assembly) must be assembled by the manufacturer and shipped as a complete assembly. Any alterations of this assembly in the field must meet manufacturer's specifications and/or the USCFC&HR.

All assemblies on this approval list must be equipped with resilient seated ball valves or resilient wedged gate valves. Butterfly valves are acceptable on backflow assemblies as long as they are approved by (USCFCCC&HR).

Double Check Assembly
Outdoor Installation - OS&Y Gates

Reduced Pressure Assembly
Outdoor Installation - OS&Y Gates

SCDHEC

LIST OF APPROVED BACKFLOW PREVENTION ASSEMBLIES

DOUBLE CHECK VALVE ASSEMBLIES

DCVA's are approved for use when protecting the potable water system from backflow when a low degree of hazard is involved. A low degree of hazard is one which may cause an actual or potential threat to the physical properties of the water system or the potability of the public or consumer's potable water system. However, a low degree of hazard would not constitute a health or system hazard. The maximum degree or intensity of pollution to which the potable water system could be degraded under this definition would cause a nuisance or be aesthetically objectionable.

The following assemblies are Double DETECTOR Check Valve Assemblies and Reduced Pressure Principle DETECTOR Assemblies. These assemblies are made up from DCVA's and RPPA's which are approved elsewhere on this list. These assemblies are designed for FIRE LINE use. If a Double Detector Check Valve Assembly or Reduced Pressure Principle Detector Assembly is prescribed, it should be done with an understanding that its meter will have to be read periodically in order to be of any value. Don't forget that when the annual testing is done, both of these assemblies are required to be tested (mainline dcva and by-pass dcva). Lastly, both assemblies (main line assembly and by-pass assembly) must be assembled by the manufacturer and shipped as a complete assembly. Any alterations of this assembly in the field must meet manufacturer's specifications and/or the USCFCCC&HR.

DOUBLE DETECTOR CHECK VALVE ASSEMBLIES ARE:

SCDHEC

LIST OF APPROVED BACKFLOW PREVENTION ASSEMBLIES

REDUCED PRESSURE PRINCIPLE ASSEMBLIES

Approved for use to protect the potable water system from backflow when there is an actual or potential health hazard. The terms "health hazard" shall mean an actual or potential threat of contamination or pollution of a physical or toxic nature to the public potable water system or the consumer's potable water system to such a degree of intensity that there would be a danger to health.

SCDHEC

LIST OF APPROVED BACKFLOW PREVENTION ASSEMBLIES

PRESSURE VACUUM BREAKERS

PVB's are approved for use when protecting the potable water system from backsiphonage only when a health hazard or non-health hazard is involved. The term "health hazard" shall mean an actual or potential threat of contamination or pollution of a physical or toxic nature to the potable water system or the consumer's potable water system to such a degree of intensity that there would be a danger to health. It is very important to understand that the PVB is **not** designed for backpressure. Also, the PVB must be installed 12" above any downstream plumbing.

SECTION 3: TESTING REQUIREMENTS & LIST OF CERTIFIED TESTERS

When double check valves, pressure vacuum breakers or reduced pressure principle backflow prevention assemblies are installed in the system, routine testing will be performed by a certified tester. It is the duty of the customer/user at the location where the backflow prevention assembly is installed to have certified inspections and operational tests made at least once per year by a certified tester.

1. New assemblies will be tested by a certified tester after installation and before use by the customer.
 2. Each assembly will be tested at least once per year by a certified tester.
 3. All backflow prevention assemblies will be tested immediately after repairs of any kind are made.
 4. In those instances where SC DHEC or LRWS deems the hazard to be great enough, certified inspections may be required at more frequent intervals.
 5. Inspection and testing will be conducted at the expense of the water user.
 6. A copy of the backflow prevention device inspection report and test results for all assemblies tested will be submitted by the certified tester and maintained on file by LRWS.
 7. A written notification of the required inspection date will be sent to each customer annually. If the inspection report is not received by the required date, notification and disconnection of services will be carried out following LRWS policy for disconnection of services.
 8. A list of certified testers will be made available to each customer required to annually test their backflow devices, if necessary (enclosed).

SECTION 4: TESTING NOTIFICATION LETTER AND REPORT FORM

A written notification of the required inspection date will be sent to each customer annually. Following is a template for the letter as well as a copy of the form showing the required testing information.

(Date)

(Customer's Name & Address)

Dear Customer:

LRWS owns and operates the water systems in the Towns of Hampton, Varnville, Brunson, Gifford and Yemassee. In order to continue to maintain the quality of our water supply at the highest level possible, LRWS has established a Cross Connection Control Program, which can be found on our website at www.lowcountrywater.com

Our records indicate that you have a backflow device that requires annual testing per State Primary Drinking Water Regulation, R61-58.7(F)7. We are requesting that all backflow device test reports be completed this year by _____. Please note the following:

- A written notification of the required inspection date will be sent to each customer annually. If the inspection report is not received by the required date, the customer will be notified that failure to provide the report within 30 days will result in disconnection of services per our Water and Sewer Use Regulations.
- Inspection and testing will be conducted at the expense of the water user. It is your responsibility to schedule testing. A list of certified testers may be found at <http://www.scdhec.gov/Environment/docs/backflow/bfgen.pdf>
- All test reports shall be submitted to LRWS by mail, fax or email at kari.foy@lowcountrywater.com

Please do not hesitate to contact us should you have any questions or concerns.

Sincerely,

Brian Burgess
General Manager

SECTION 5: INVENTORY OF LRWS TESTABLE DEVICES and TEST RESULTS

An inventory of all testable backflow prevention assemblies will be maintained as part of the Cross Connection Control program. The inventory will include the customer name, address, device manufacturer, model number, serial number, description of location on the property, most recent test date, test method, tester name and certification number, and results of the most recent test. This inventory will be reviewed and updated annually upon receiving test results.

LRWS is to be provided a written report of the inspection and testing results for all assemblies tested within the LRWS system. Copies of certified test results will be kept on file as part of the Cross Connection Control Program.

This section is organized by individual water system.

SECTION 6: RESIDENTIAL LAWN IRRIGATION SYSTEMS

A connection between LRWS and a low hazard residential irrigation system with no chemical addition will be protected by a residential dual check valve. Dual check valves associated with low hazard residential irrigation systems do not need yearly inspections. These devices will be the responsibility of LRWS and will be changed out when meters are changed out.

SECTION 7 – STATE PRIMARY DRINKING WATER REGULATIONS FOR CROSS CONNECTION CONTROL

**STATE PRIMARY DRINKING WATER REGULATIONS
AS AMENDED APRIL 29, 2005
R.61-58.7(F)**

F. Cross Connection Control

(1) General

(a) All public water systems shall initiate and maintain a viable cross connection control program. Such a program shall consist of:

- (i) Locating and eliminating unprotected cross connections.
- (ii) Maintaining records pertaining to the location of existing backflow prevention assemblies, type and size of each assembly and annual test results.

(b) No person shall install, permit to be installed or maintain any cross connection between a public water system and any other non-public water system, sewer or a line from any container of liquids or other substances, unless an approved backflow prevention device or assembly is installed between the public water system and the source of contamination.

(2) Low Hazard Cross Connections

A connection between an approved public water system and another water source not hazardous to health but not meeting the standards of the approved public water system and not cross-connected within its system with a potentially dangerous substance shall be considered a low hazard category cross connection. At a minimum, an approved Double Check Valve Assembly or Pressure Vacuum Breaker must be installed on a low hazard cross connection except as provided for in section 3 below.

(3) Residential Lawn Irrigation Systems

(a) Low hazard residential lawn irrigation systems - Each public water system which has low hazard residential irrigation systems directly or indirectly connected to their public water system must have a written low hazard residential lawn irrigation system cross connection control policy. This policy must be documented in writing and must be approved by the governing body of the public water system. The policy must specify the minimum acceptable device for low hazard residential lawn sprinkler systems. The minimum acceptable device for low hazard residential lawn sprinkler systems is a residential dual check. If a water system specifies another backflow prevention assembly as the minimum acceptable protection for these cross connections, the policy must be approved by the governing body of the public water system with due opportunity being provided for public comment and participation. The written policy must:

- (i) Identify the type of backflow prevention device or assembly that is required to be installed on low hazard residential lawn irrigation system connections.
- (ii) Establish a schedule for the required testing of double check valve

assemblies, or other testable assembly, if testable assemblies are designated by the policy as minimum acceptable protection for low hazard residential lawn irrigation systems. The minimum testing frequency must be specified in the policy and appropriate records must be maintained to verify compliance with the established testing requirements.

(iii) Establish a schedule for the required change out of residential dual checks if these are the devices designated by the policy as minimum acceptable protection for low hazard residential lawn irrigation systems. The minimum change out frequency must be specified in the policy and appropriate records must be maintained to verify compliance with the established change out requirements.

(b) High hazard residential lawn irrigation systems – Any residential lawn irrigation system that includes chemical addition, or is also connected to another water source which is not an approved public water system, shall be considered a high hazard cross connection and must meet the requirements of paragraph (4) below.

(4) High Hazard Cross Connections

(a) A connection between an approved public water system and a service or other water system which has or may have any material in the water dangerous to health, or connected to any material dangerous to health, that is or may be handled under pressure, or subject to negative pressure, shall be considered a high hazard category cross connection. Protection shall be by air gap separation or an approved reduced pressure principle backflow prevention assembly.

(b) Reduced pressure principle backflow prevention assemblies shall not be installed in any location subject to possible flooding. This includes pits or vaults which are not provided with a gravity drain to the ground's surface that is capable of exceeding the discharge rate of the relief valve.

(5) Fire Sprinkler Systems

Fire line sprinkler systems, except those in the high hazard category shall be protected by an approved double check valve assembly. High hazard fire sprinkler systems shall include, but not be limited to: antifreeze systems, foam systems, systems charged from or tied into ponds, lakes, streams, or any water source other than the approved public water supply. High hazard category fire sprinkler systems shall comply with the requirements of Paragraphs (4) above.

(6) Approved Devices and Assemblies

The Department shall prepare and publish a list of backflow prevention assemblies approved by the Department for use in S.C., and this list shall be updated at least once annually.

(7) Testing Requirements

When double check valve assemblies, pressure vacuum breakers, and/or reduced pressure principle backflow prevention assemblies are installed to protect a public water system against the possibility of backflow from a customer's water service, routine testing of the assemblies shall be performed by a certified tester.

- (a) Each assembly shall be tested by a certified tester after installation and before use by the customer. Except as specified in paragraph 3(a)(ii) above, each assembly shall be tested at least once annually by a certified tester.
- (b) The public water system is to receive a written report of the inspection and testing results for all assemblies tested within its distribution system. The report shall be submitted by the certified tester making the inspection and test.
- (c) All backflow prevention assemblies shall be tested immediately after repairs of any kind are made to the assembly.

(8) Backflow Prevention Tester Certification

There are four (4) types of certified testers of backflow prevention assemblies; General Tester, Limited Tester, Inspector Tester, and Manufacturer's Agent. The definition of each type of certified tester is specified in R.61-58(A).

- (a) Each certified tester's license shall expire three (3) years from the date of issue. In order to renew this certification for three (3) more years, the tester shall come before a designated person approved by the Department and shall successfully complete a written examination with a passing score of 70%, and perform the prescribed test on an approved reduced pressure principle backflow prevention assembly, double check valve assembly, and a pressure vacuum breaker using the tester's own differential pressure gauge. The gauge must be accurate within 2% of full scale or +/-0.3 pounds per square inch differential (PSID). Any gauge found to be inaccurate or malfunctioning will be required to be calibrated or repaired as needed to bring it into compliance before certification will be renewed.
- (b) Any applicant for certification who fails to properly perform the above prescribed tests will have his certification revoked immediately and will have to successfully complete the state sponsored backflow prevention training and certification course in order to become re-certified as a tester of backflow prevention assemblies in South Carolina.
- (c) A certified tester may have his tester's certification revoked due to incompetence or falsification of test results, as determined by the Department.
- (d) The Department shall reserve the right to charge or allow for the charge of a nominal fee for the administration of the recertification of testers. This fee shall not exceed fifty dollars (\$50.00).

(9) Installations of Pressure Vacuum Breakers

Where used, pressure vacuum breakers shall be installed at a minimum of 12" inches above the highest downstream piping and shall not be subject to backpressure.
